

AI Red Flag Detector Report

Junior Full Stack Developer | Early-Stage Startup (Remote / Bengaluru)

OVERALL RISK SCORE — HIGH RISK

88 / 100

Top Red Flags

- **[Severity 10/10] “Junior” role requiring 5+ years of experience**
Title/pay-grade deception, or careless copy-paste — either signals disorganized HR.
- **[Severity 9/10] “Remote” job with hidden relocation clause**
Relocation to Bengaluru required after probation — classic bait-and-switch on remote claims.
- **[Severity 9/10] 24/7 support + “work hard play hard” + “thrive under pressure”**
Textbook unpaid-overtime and burnout signaling, reinforced by real employee reviews.
- **[Severity 8/10] No salary range disclosed**
Combined with junior title + senior demands, strongly suggests lowball compensation.
- **[Severity 8/10] 7+ core technologies required, AI/ML “preferred”**
React/Angular/Vue, Node/Python/Java/Golang, 3 clouds, Docker/K8s — no one is deeply skilled in all of this.
- **[Severity 8/10] Contradictory scope for a “junior” hire**
Build apps, manage cloud infra, design architecture, lead client meetings, mentor juniors — one role, five jobs.
- **[Severity 7/10] 8-month-old startup, 12 employees, no public funding info**
High instability risk with no visible runway or validation.
- **[Severity 7/10] Existing reviews already mention long working hours**
Not hypothetical — current employees are already reporting the issue.
- **[Severity 6/10] “We are like a family” language**
Often correlates with guilt-based overwork culture and blurred compensation boundaries.

Positive Signals

- Mentoring responsibility implies some structure/hierarchy is intended.
- AI/ML listed as “preferred,” not mandatory — more realistic than most postings.
- Small team size could mean higher visibility and impact, if fairly compensated and scoped.

Risk Breakdown

Category	Risk Level
----------	------------

Requirements	High
Culture	High
Remote Authenticity	High
Hiring Practices	High
Company Stability	Medium-High

Final Verdict

■ AVOID

(or apply only with extreme caution and heavy negotiation upfront)

The combination of title/experience mismatch, no salary transparency, a disguised relocation requirement, and burnout language stacked on top of an 8-month-old unfunded startup makes this a high-risk application. If still interested, treat the interview as a due-diligence gate, not a formality.

5 Smart Interview Questions

- 1 Clarify title/pay mismatch**
“The listing says “Junior” but requires 5+ years — can you clarify the actual seniority level, title, and salary band for this role?”
- 2 Test remote authenticity**
“Can you walk me through what “remote” means here day-to-day — is relocation to Bengaluru a hard requirement after probation, or situational? What happens if I decline?”
- 3 Surface real workload**
“What does the on-call or ‘24/7 support’ expectation actually look like in practice — how often, and is it compensated separately?”
- 4 Reveal real tech needs**
“Given the wide tech stack listed (React/Angular/Vue, multiple clouds, Kubernetes, AI/ML), which will I actually use in my first 90 days, and which are ‘nice to have’?”
- 5 Probe company stability**
“Since the company is 8 months old — what’s the current funding status and runway, and how many people have joined or left the team since founding?”
