

Job Search & Discovery Report

Subalakshmi B | AI & Data Science, CMS College of Engineering | Generated July 9, 2026

1. Professional Profile

Current role	Third-year B.Tech student, Artificial Intelligence & Data Science (expected graduation 2028)
Years of experience	No formal industry experience; project- and hackathon-based experience only
Key skills & technologies	Python (beginner), Pandas, Data Structures & Algorithms, foundational AI/ML concepts
Industry/domain expertise	Computer Networks & Internet Protocols (NPTEL); applied data preprocessing for simulation (digital twin battery modeling)
Current company type	N/A - currently a student
Current location	Tamil Nadu, India
Certifications	NPTEL - Computer Network and Internet Protocol (71%); Dashboard Creation Workshop
Notable achievements	EVathon hackathon - digital twin model for lithium-ion battery monitoring; 92% SSLC, 87% HSC, 87% current B.Tech

Note: your resume does not yet include GitHub portfolio projects (NutriScope, Smart Medical Monitoring, Healthcare Dashboard UI, TruthLens) or the 60-day AI challenge, which could strengthen a job-search profile.

2. Job Search Criteria

Desired role type	Internship
Preferred location setup	Hybrid
Posting recency	Last 7 days
Salary/stipend expectations	Not specified - standard internship stipend range assumed
Exclusions	None specified

3. Top Opportunities

Company	Role	Location	Posted	Match	Why It Fits	CTC/Stipend
Ansrsource India	Intern - AI/ML	Hybrid, Bengaluru	Jul 6, 2026	55%	Strong alignment with AI/ML focus, DSA foundation, and Pandas; matches hybrid preference exactly. Caution: posting requires a completed Bachelor's/Master's degree - likely an eligibility mismatch for a third-year student.	Not disclosed
Marzelet Info Technology	Full Stack Developer Intern	Onsite, Avadi, Chennai	Jul 7, 2026	60%	Values Python + basic HTML/CSS/JS + Git, in line with web project work; open to freshers. Onsite only (not hybrid). Also expects Django/PostgreSQL/TypeScript, not yet on resume.	Not disclosed
Evolve Robot Lab	Gen AI Internship	Onsite, Chennai	Jul 2, 2026	55%	Open to any-year students/freshers in AI & Data Science; AI/GenAI focus overlaps with degree. Onsite only. Also involves robotics tools (MATLAB, ROS, CAD) outside current skillset.	Rs.10,000-15,000/month

Excluded: Solution Architect Intern and Technical Architect Intern (both Marzelet) - titles imply prior production experience, not a fit for a fresher/entry-level profile.

4. Skills & Market Analysis

Most Commonly Required Skills

Python, React/Next.js or general JS frontend basics, Git/GitHub, REST APIs, SQL/databases, and - for AI-specific roles - TensorFlow/PyTorch/scikit-learn plus strong DSA/statistics fundamentals.

Skill Gap Analysis

Resume Shows	Postings Expect	Gap
Python (Beginner)	Working proficiency, often + Django/Flask	Needs strengthening + a framework
Pandas only	Pandas + scikit-learn/TensorFlow/PyTorch	ML framework exposure missing
No web dev listed	React/Next.js, HTML/CSS/JS	GitHub projects not reflected on resume
No Git/GitHub mention	Git/GitHub required almost everywhere	Easy fix - already used actively
No cloud/deployment	Listed as 'preferred' in most postings	Minor gap for internship stage

Market Demand Insights

Full-stack and Gen AI/ML internships in Tamil Nadu are currently concentrated in Chennai and Coimbatore, mostly onsite, with stipends around Rs.10,000-15,000/month where disclosed. Hybrid roles for freshers are less common in this region; the one hybrid role found is based in Bengaluru. Most listings are genuinely fresher-friendly (no prior internship required), which works in favor of a third-year applicant.

Recommendations to Improve Interview Chances

- Add GitHub portfolio projects (NutriScope, Healthcare Dashboard, TruthLens) to the resume - only one project currently appears, understating actual development exposure.
- List Git/GitHub explicitly as a skill - already used actively, and it's a hard requirement almost everywhere.
- Clarify Python proficiency - 'Beginner' may undersell experience given the 60-day AI challenge and multiple hands-on projects.
- Before applying to Ansrsource, directly confirm eligibility for pre-final-year students rather than assuming disqualification or wasting the application.
- Consider widening the recency filter (14-30 days) to surface more hybrid options beyond Bengaluru, since the 7-day window is thin for hybrid roles.

Overall Fit Assessment

For internship-level AI/full-stack roles, the academic background and hackathon project are relevant, but the resume as written doesn't yet reflect the broader project portfolio, which weakens competitiveness against other fresher applicants. Compensation for these roles is stipend-based and modest (Rs.10-15K/month where disclosed), consistent with entry-level internships in this market. The hybrid preference is the biggest constraint right now, since most matching postings in Tamil Nadu are onsite-only.
